Tailwind CSS

- what is Tailwind CSS?
- how to use in Angular
- Tailwind CSS features
- Cheat Sheet & Docs

Agenda

What Is Tailwind CSS?

- It's not a component framework, but a utility framework
- It provides customizable utility classes, no components
- It adopts to any design and
- Its build size is tiny

Installing Tailwind In Angular

- npm i -D tailwindcss postcss autoprefixer
- npx tailwindcss init and set content:
- add tailwind to your global styles.(s)css

```
module.exports = {
  content: ['./src/**/*.{html,ts}'],
  theme: {
    extend: {}
  },
  plugins: []
};
```

```
@tailwind base;
@tailwind components;
@tailwind utilities;
```

Tailwind Features

- rounded: adds a border-radius of 0.25rem to an element
- text-gray-400: adds a light gray color (#cbd5e0)
- bg-gray-100: adds a light gray (#f7fafc) background color
- md:text-gray-100: adds a media query for an element such that screen widths greater than or equal to the medium screen (768px by default) applies a very light gray (#f7fafc) to the element
- hover:underline: adds an underline to a text when hovered on
- xs:text-lg: similar to md.., this applies a media query for an element such that a font size of 1.125rem (by default) is used for an element when the screen width is greater than or equal to the extra small screen (640px by default)
- mt-20: applies a margin-top of 5rem to an element

Cheat Sheet & Docs

- https://tailwindcss.com/docs/configuration
- https://tailwindcss.com/docs/customizing-colors

Best Practices

- Use Tailwind in new projects!
- Use Cheat Sheet
- Use fewer class when possible
  - py-4 not pt-4 & pb-4
- Keep class ordering
  - by prettier: prettier-plugin-tailwindcss
